

FUN Fast Fact Math Practice

Give choice and make math fun, and your child will want to practice!
The QR Codes are videos showing how to play each game.

Flash Card Practice

Pull out 5-10 flashcards and study those for several days in a row. Once you can solve the fact quickly, add the flashcard to a “I know” pile.

Slap-it

Lay 5 cards on the table. Ask your child to slap the card that equals _____. Your child can use a spatula, fly swatter, or even their hand. For extra practice, have your child call out the numbers for you to slap.

Find it on the Floor

The adult takes regular sized paper and writes 1 answer on each paper from the flashcards the child is studying. Lay the papers around the room. The child takes flashcards, solves one and places the flashcard on the paper with the correct answer. The adult checks the answers.

***Go Fish* (2-4 players)**

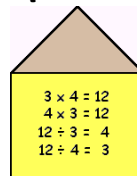

Each player gets 7 cards in their hand. They ask the other player for a card with their answer and work to make pairs with the cards. They draw a card if the other player doesn't have that card. The player with the most pairs wins in the end.

Fast Fact War

2 players each put a card down to face off. The player with the highest answer keeps both cards. If the answer is the same, both players put down two more cards and the player with the highest answer on those cards keeps all 4 cards. The player with the most cards when the pile runs out wins.

Fact Family* ***(Grades 2-5)**

Slide the fact family practice into a sheet protector. Use your fact family knowledge to fill in the missing numbers.
